Last step: The wallet created

Observation:

1. We learned how a cryptographic wallet is created using a private key and public key pair for secure identity in blockchain.
2. The wallet does not store actual coins but stores keys that allow access and control over blockchain assets.
3. We understood that the private key must be kept secret, while the public key or wallet address is shared to receive funds.

ASSESSMENT

Rubrics	Full Mark	Marks Obtained	Remarks
Concept	10		
Planning and Execution/ Practical Simulation/ Programming	10		
Result and Interpretation	10		
Record of Applied and Action Learning	10		
Viva	10		
Total	50
